

Red Roo Releases New Track Trencher

MELBOURNE, July 2008 -- Red Roo Sales & Service Company Pty Ltd has released the newest member of its trencher family - the HT2024TK track trencher.

Spec built by Barreto in the USA, the HT2024 continues the tradition of innovative and durable equipment designed for the construction and rental industries.

Powered by a 20hp (14.9kW) Honda OHV V-twin engine, the HT2024TK provides class leading power and reliability. Heavy duty Char Lynn hydraulic motors easily handle the full hydraulic load at the digging chain and track drive. The track pattern offers a massive 460 sq. inches of ground contact, providing plenty of traction in the most difficult terrain.

The HT2024 design features safety, simplicity, durability and efficiency. A safety clutch on the left handlebar engages and disengages all hydraulic power to the track drive and digging chain without micro switches or killing the engine. All components of the hydraulic system are open and accessible for easy adjustment and maintenance.

Available in depths from 24" (600mm) to 42" (1.07m) and 4" (100mm) to 6" (150mm), the HT2024 puts the power where required.

To arrange a demonstration or learn how the complete line of Red Roo ground engagement equipment can help your business bottom line, contact Red Roo on 1300 133 767 or visit online at www.redroo.com.
