

Red Roo Releases SHP400-2 Grinder

MELBOURNE, JULY 2008 -- Red Roo Sales & Service Company Pty Ltd has released the Series 2 SHP400 swivel head stumpgrinder. Available now, the SHP400-2 features a number of improvements to this popular stump grinder.

“Since the acquisition of the SM2/SHP400 from AgTrak early last year, we have focused on continually improving the machine,” says James Kerr of Red Roo. “We listened to operators of both our machines and our competitors and the result is the SHP400-2.”

The SHP400-2 features an upgraded hydraulic system, freewheel hubs, improved weight distribution, and improvements to the cutter disk.

Standard equipment on the SHP400-2 includes a 25hp OHV V-twin Kohler Command Pro engine, factory spec heavy duty air cleaner, electric clutch, freewheel hubs and independent wheel drive. Every SHP400-2 is factory fitted with the Red Tooth™ triple rotation cutting system.

The SHP400-2 features a unique, over centre swivel design that allows a swing of 850mm. The compact design allows the operator the most horsepower on site in the narrowest package available in its class. Only 740mm wide, the SHP400-2 is perfect for applications where big power and tight access are required.

For more information on the SHP400-2 or to arrange for a demonstration, contact Red Roo on 1300 133 767 or www.redroo.com.
