## **OPERATION**

- Familiarize yourself with the rotary hoe and its controls.
- 2) Free Wheel Hub Feature –
  Operation: Pull one free wheeling pin slightly, using the split ring. rotate the pin until the 3mm (1/8") diameter roll pin aligns with the slot in the mounting plate. Allow the pin to slide through the slot. Repeat for the other wheel. Roll the Rotary Hoe until each pin drops into a hole in the hub. The wheel hubs are now locked. Reverse the procedure to unlock the wheels.
- 3) Remove the rotary hoe from its trailer. Use caution.
- 4) Safety Clutch Lever is located on the left handle bar (from rear) of the machine. The machine will not operate unless this lever is pressed up against the handle grip. When the lever is released, both wheels and tynes stop.
- 5) Wheel Drive Control Lever Select Forward or Reverse to control the direction (not the speed) of the wheels. When the control is in Neutral, the wheels are locked. For your safety, the reverse lockout feature prevents the tynes from rotating when the Wheel Drive is in Reverse.
- 6) Speed Control Lever The wheel speed is variable when the Wheel Drive Control Lever is in either Forward or Reverse. The further forward the Speed Control, the faster the Rotary Hoe will travel. The fastest speed is designed only for transport. Use a slow speed for rotary hoeing and to adjust for soil or sod conditions.
- 7) Tyne Control Lever The tynes operate at a constant speed. The tyne drive lever must be moved forward or reverse when hoeing. If an object becomes lodged in the tynes, put Wheel Drive Control Lever in neutral and change tyne direction to dislodge it.
- Open fuel shut-off valve, if engine is equipped. Move choke control to CHOKE or START position.

  Note: Choke must fully close. Move throttle control to RUN or FAST position. If engine is equipped with rocker style stop switch, push RUN or I (I = Ignition) before starting.

  Typical Throttle & Stop

Rewind Starter: Grasp rope handle and pull slowly until resistance is felt to prevent kickback. Then pull cord rapidly to overcome compression and start engine. Repeat if necessary with choke off and throttle control in FAST position. Operate engine in FAST position.

- Hoeing Operation In most soil conditions, the depth bar can be set with the pin in the third hole from the top.
  - A. Begin with the Wheel Speed Control all the way back (toward the operator)
  - B. Wheel Drive Control Lever in forward
  - C. Tyne Drive Control Lever in forward or reverse
  - D. Squeeze the Safety Clutch Lever
  - E. Adjust the Speed Control forward until a suitable speed is obtained based on soil conditions. Under most conditions, at least two passes must be made. To increase depth, move the depth bar up one hole at a time.
- 10) Never run the machine in reverse while the tynes are rotating. Always move the tyne control lever to Neutral before reversing the wheels.
- 11) To prevent injuries from rotating tynes, KEEP REAR TYNE COVER CLOSED and MACHINE LEVEL while tynes are operating.
- 12) /

WARNING! - OPERATE ROTARY HOE ON LEVEL GROUND ONLY.

13)

WARNING! – DO NOT LEAVE ROTARY HOE UNATTENDED WITH ENGINE RUNNING.

14)

WARNING! – KEEP HANDS AND FEET CLEAR OF TYNES AT ALL TIMES!

15) Stop Engine: Do not move choke control to CHOKE position to stop engine. Backfire or engine damage may occur. Move throttle control to SLOW position, then push rocker switch to O (STOP), or turn key to OFF, if equipped.

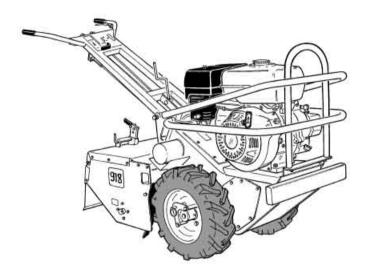

**Typical Stop Switches** 

## **AFTER USE**

- Turn fuel tap to "OFF" position.
- Allow machine to cool down. Wash mud and dirt off of the rotary hoe. Ensure no water enters the carburettor.
- Remove any weeds, wire, rope, etc. that may have wrapped around the knives and rotor assembly.

# SAFETY PRECAUTIONS AND OPERATING INSTRUCTIONS

## RH916 / RH918 ROTARY HOE

## SAFETY PRECAUTIONS FOR RH918 USERS

## **USE COMMON SENSE** AND PLENTY OF IT

- DO NOT allow any person to operate the rotary hoe without first reading and understanding the safety precautions and operating instructions. KNOW THE CONTROLS AND HOW TO STOP THE ROTARY HOE QUICKLY IN AN EMERGENCY.
- **NEVER** allow children to operate the rotary hoe.
- ALWAYS wear protective clothing when operating the rotary hoe. This includes, but is not limited to; safety glasses, loose fitting gloves, steel capped boots and hearing protection. NEVER wear loose fitting clothing or jewellery when operating the rotary hoe. Keep all clothing away from moving parts. Items could become caught in the machine. resulting in injury.
- 4) ALWAYS use the rotary hoe in a well lighted area.

ALWAYS operate the rotary hoe on level ground only. Police the area before rotary hoeing.

Remove any foreign objects in the digging area - bricks, rocks, wire and sticks, Locate and mark any sprinkler heads, water pipes, gas lines, electrical and telephone cables or any other hazard either below or above ground.

- DO NOT allow other persons near the rotary hoe. It is up to the operator to 6) keep bystanders and animals a minimum of 6 metres (20') away from the machine while in operation.
- **NEVER** operate the rotary hoe when fatigued. ALWAYS BE ALERT! If you get tired while operating the rotary hoe, take a break. If you have any type of physical or mental condition that may be aggravated by strenuous work, consult with your physician before you operate this equipment. NEVER operate the rotary hoe under the influence of medication, alcohol or drugs.

- **ALWAYS** make certain the Tyne Control lever is set at neutral while loading and unloading the rotary hoe, or moving to and away from working area.
- 10) **NEVER** run the machine in reverse while the tynes are rotating. Always move the tyne control lever to "OFF" before reversing the wheels.

11) NEVER operate the unit without the safety guards in place and in working order. Keep the unit well maintained and in good working order.

- 12) **DO NOT** leave the machine unattended while the engine is running.
- 13) **DO NOT** overspeed the engine or alter the governor settings. Excessive speed is dangerous and will shorten engine life.

NEVER operate the rotary hoe in an p enclosed area. Engine exhaust contains carbon monoxide, an odourless and tasteless poison.

STOP the engine and disconnect the spark plug lead(s) and allow engine to cool before inspecting or performing maintenance on the rotary hoe.

## 16)

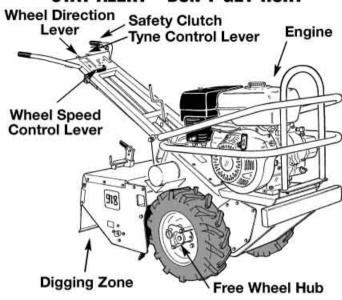

#### REFUELLING

Shut off engine. DO NOT REFUEL AN ENGINE WHILE OPERATING!

- \* Allow engine to cool. Minimum 5 minutes.
- \* USE UNLEADED FUEL ONLY. Use clean, fresh unleaded fuel.
- \* Do not mix oil with unleaded fuel.
- \* Do not over-fill fuel tank. Allow space for fuel expansion.
- \* Do not smoke.
- \* Allow no naked flame or hot material in refuelling area.
- \* Use only approved fuel containers and funnels. Remember, fuel is a potential hazard.

## STAY ALERT - DON'T GET HURT

## TRANSPORT

Be sure Tyne Control Lever is set to "Neutral" while loading and unloading the rotary hoe and when moving to or from the jobsite.

### **BEFORE USE**

- 1) Ensure that all grass and weeds have been cut as low as possible.
- 2) If the rotary hoe is to be used in clay or hard ground conditions, it is recommended to water the area thoroughly and allow sufficient time for the earth to soften.

Police the area. Remove any foreign objects from the area.

4) Identify and mark the location of sprinkler heads, gas pipes, telephone cables, etc.
